Installation Instructions 2000 - 2004 Toyota Sequoia - Lower Grille

1. Decided you want to customize the look of your Toyota Sequoia? This is what you are looking at now and below is the improvement that this grille will make.

2. Tools Required: Gloves- for your hands sake (there might be some sharp edges), a towel (or something soft to lay your grille onto), needle nose pliers, and maybe some sheers.

3. Identify the **FRONT** side of the grille. The back side has the stamping droop. We try to label the back with a sticker, if you have trouble getting it off try some rubbing alcohol.

4. Test the fitment of the grille in the lower opening of the Sequoia. Notice that there is a top and bottom as well to the shape of the grille.
5. If you need to do some fine tuning, remove the grille, take off a portion of the push-on edge guard and trim the grille with a pair of sheers. Then reinstall the edge guard and test again. This is generally not a required step.

6. With the grille located into place now and the fit is good, you need to open your hood.
7. With the hood up your hands can reach the back-side of the black plastic mesh grille that came on your sequoia.

8. Place the grille into position and with one of your hands hold it in position. With the other hand insert a zip-tie from the back of the grill in three locations (one on both sides and one in the middle). After you insert the zip-tie with the lug of the zip-tie on the inside (behind the grille), then feed it back through, tighten it up and clip off the extra zip-tie.

9. To keep clean we recommend Aluminum Polish that can be purchased at auto parts stores. It only requires hand polishing.

This is an aftermarket automotive component and thus we make no warranty for any part of the vehicle. Use at your own risk.

Installation Instructions 2000 - 2004 Toyota Sequoia - Upper Grille

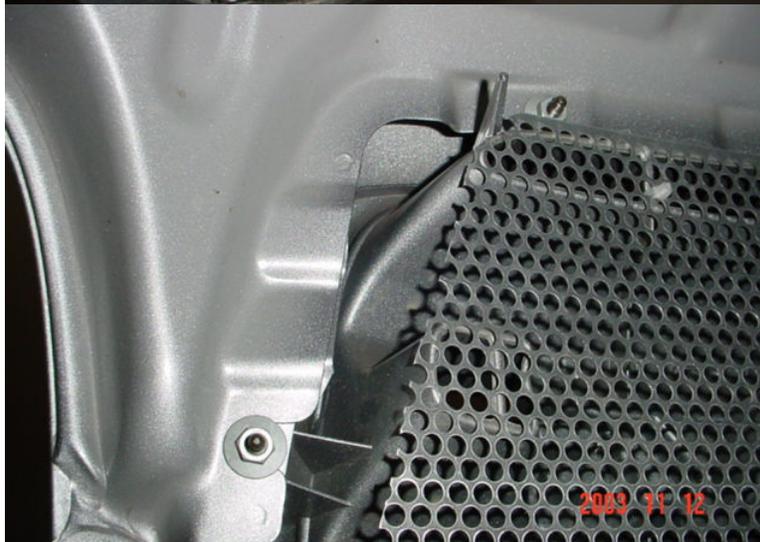

10. Tools Required:

Gloves- for your hands sake (there might be some sharp edges), a towel (or something soft to lay your grille onto), needle nose pliers, and maybe some sheers.

11. Identify the **FRONT** side of the grille. The back side has the stamping droop. We try to label the back.

12. Open the hood on your Sequoia and place the grille against the back side of the FACTORY front grille. You will have to slide it behind the hood latch bar.

13. Please pay close attention to both upper corners as there are two pegs that need to be avoided when placing the grille. I cut two notches in the corners in these areas.

14. With the grille located into place now and the fit is good, you need to Place one zip-tie

GrilleGuy.com, LLC

around the upright grille bar (lower left corner shown) of the factory grille and through your new mesh grille. Make sure that you place the zip-tie towards the bottom of the upright (vertical) grille member and through a hole in the new grille close to the bottom. This will allow you to get the zip-tie snug and to not have the grille slide later. This step may take four hands (I recommend a helper).

15. Now pull the hood down and look from the outside and check fitment around the edges and make your holes look HORIZONTAL (close enough).

16. Now add more zipties. I have provide you with several. They are intended to go one in each of the four corners and one at the top center. This shows a good image of putting the ziptie at the bottom of the upright grille member.

17. To keep clean we recommend Aluminum Polish that can be purchased at auto parts stores for about \$4. It only requires hand polishing.

This is an aftermarket automotive component and thus we make no warranty for any part of the vehicle. Use at your own risk.
