## Install Instructions

### 01,02,03,04 Hyundai Santa Fe Upper Grille

#### Kit Contents:

- 1 Piece Grille
- 6 40#, UV resistant zip ties
- 3 pieces of rubber trim

#### Before the GrilleGuy!

**Note:** If trim needs to be applied to the grille, please download the trim installation instructions. Improper installation can damage the grille.

Decide if you want the Hyundai emblem on your Santa Fe. I have provided photos of both.

This is without the emblem.

The emblem is removed by two screws from the backside of the OEM grille. Simply leave it off if this is the look you desire.

This is with the emblem. If you choose this method, the emblem will help to secure the grille to the OEM grille. You will need to use some diagonal cutters or a hammer and chisel to remove a small portion of the grille to allow the emblem mounting to protrude through the material. We always mark where you need to cut, but we DO NOT make this cut. The emblem is removed by two screws on the backside of the OEM grille.

The grille will look like this just before you reinstall the emblem.

The posts on the emblem will fit through the holes you just made. The holes do not have to be perfect as the emblem will cover the edges that you have cut / chiseled. If chiseling place the grille on a supported surface with the good side up!

Using the supplied zip ties secure the grille to the OEM grille in all of the corners. If you do not use the emblem you may want to add additional zip ties at the top and bottom near the center. The zip ties are easily installed from the back with the hood opened. This way the locking mechanism on the zip ties is not visible.
