- Polishing your Aluminum Grille

The plastic trim material has been left off of your grille to allow for polishing. By polishing your grille the oxidative layer will be removed from the aluminum and your grille will be left with a brilliant shine.

Although this is optional, we highly recommend this **prior** to installation. Ordinary aluminum polish can be purchased at nearly any auto parts supplier or retail chain for about \$4 (Wal-Mart, Target....). Visit our website, GrilleGuy.com, Tips and Tricks, for more details.

Apply sparingly and rub off until you have a brilliant shine!

Then wash thoroughly with warm water (hot water works best) and a mild soap just as you would your car.
